

30. You and your team are working on a project. One team member adds a new feature to the project. You need to fetch the latest changes, create a new branch, and implement your feature without affecting the existing code. Tasks:

- Fork a repository (you can use an existing repository or a partner's repository).
- Clone the repository to your local machine.
- Create a new branch for your feature.
- Implement your changes and push them to your forked repository.
- Submit a pull request to the original repository.

Step1: Open a Existing Repository

Step 2: Open vs code and open new terminal and open repository and create a branch

```
PS C:\Users\Bhavya\git-vscode-demo> git branch
* feature-login
  main
PS C:\Users\Bhavya\git-vscode-demo> git checkout -b feature-login
fatal: a branch named 'feature-login' already exists
PS C:\Users\Bhavya\git-vscode-demo> git branch
* feature-login
  main
PS C:\Users\Bhavya\git-vscode-demo>
* History restored
```

Step3: Create a login.py new file

Step 5: check the status and stage

```
PS C:\Users\Bhavaya\git-vscode-demo> git status
On branch feature-login
Untracked files:
  (use "git add <file>..." to include in what will be committed)
    login.py

nothing added to commit but untracked files present (use "git add" to track)
PS C:\Users\Bhavaya\git-vscode-demo> git add login.py
PS C:\Users\Bhavaya\git-vscode-demo> git status
On branch feature-login
Changes to be committed:
  (use "git restore --staged <file>..." to unstage)
    new file:   login.py
```

Step 6: Commit and push the branch into github

```
PS C:\Users\Bhavaya\git-vscode-demo> git commit -m "Added login function"
[feature-login a4b4cab] Added login function
1 file changed, 9 insertions(+)
create mode 100644 login.py
PS C:\Users\Bhavaya\git-vscode-demo> git push -u origin feature-login

remote:   https://github.com/bhavaya13139/git-vscode-demo/pull/new/feature-login
remote:
To https://github.com/bhavaya13139/git-vscode-demo.git
 * [new branch]   feature-login -> feature-login
branch 'feature-login' set up to track 'origin/feature-login'.
```

Step 7:create a pull request

The screenshot shows the GitHub 'Open a pull request' interface. At the top, the browser tab is 'Comparing main...feature-login' and the URL is 'github.com/bhavya13139/git-vscode-demo/compare/feature-login?expand=1'. The page title is 'Open a pull request' with a subtitle: 'Create a new pull request by comparing changes across two branches. If you need to, you can also [compare across forks](#). [Learn more about diff comparisons here](#).' Below this, a comparison bar shows 'base: main' and 'compare: feature-login' with a green checkmark and the text 'Able to merge. These branches can be automatically merged.' The main form has two sections: 'Add a title *' with the text 'Added login function' and 'Add a description' with a text area containing 'Add your description here...'. To the right of the form are settings for Reviewers, Assignees, Labels, Projects, Milestone, and Development. At the bottom right is a green 'Create pull request' button. A footer note says 'Remember, contributions to this repository should follow our [GitHub Community Guidelines](#).'

Step 8:merge pull request

The screenshot shows the GitHub 'Added login function #1' pull request page. The browser tab is 'Added login function by bhavya13139' and the URL is 'github.com/bhavya13139/git-vscode-demo/pull/1'. The page title is 'Added login function #1'. At the top right, it says 'Ready to merge' and 'Code'. Below the title, it says 'bhavya13139 wants to merge 1 commit into main from feature-login'. The pull request details show 'Conversation 0', 'Commits 1', 'Checks 0', and 'Files changed 1'. A comment by 'bhavya13139' is shown with the text 'No description provided.' Below the comment, a green checkmark indicates 'No conflicts with base branch' and 'Merging can be performed automatically.' A green 'Merge pull request' button is visible. At the bottom, there is a section for 'Add a comment' with a text area. The right sidebar shows settings for Reviewers, Assignees, Labels, Projects, Milestone, and Development. A footer note says 'Remember, contributions to this repository should follow our [GitHub Community Guidelines](#).'

Step 10:update your local main branch

```
branch 'feature/login' set up to track 'origin/feature/login'.
PS C:\Users\Bhavya\git-vscode-demo> git checkout main
Switched to branch 'main'
Your branch is up to date with 'origin/main'.
PS C:\Users\Bhavya\git-vscode-demo> git pull origin main
remote: Enumerating objects: 1, done.
